Strengthen Your Security Defenses with Censys

The Censys Program for Managed Security Services Providers

With the **Censys Program for Managed Security Services Providers (MSSPs)**, you can efficiently secure one customer or one hundred – all from one platform. As cyber threats continue to evolve in sophistication and frequency, MSSPs require robust tools like Censys to effectively protect their customers' attack surface.

Unmatched Intelligence

Born out of the ZMAP project, Censys is making the internet a safer place. By leveraging our proprietary, real-time Internet Map we empower users to discover, monitor, and analyze security exposures and attacker infrastructure.

With Censys data, you can answer questions like:

✦ Is my customer exposed to today's zero-day announcement?

✦ What assets are exposed to the internet that my customer doesn't know about?

Censys Differentiators

Censys uniquely has:

✦ **The largest scanning infrastructure in the world**
We see more of the internet than anyone.

✦ **The largest certificate repository in the world**
We have 10B+ certs and counting.

✦ **1,000+ points of data on each host and certificate**
See JARM fingerprints, ransomware notes, and more.

✦ **7+ years of history on internet data**
Analyze trends back to their origins.

✦ **Nonstandard protocol and port scanning**
Did you know that 60% of services are on non-standard ports? We scan these, too.

Program Benefits

✦ **Continuous Visibility**
Censys provides you with a comprehensive view of your clients' internet-facing assets, including devices, services, and vulnerabilities. This visibility enables you to continuously monitor your clients' digital footprint, identify potential security risks, and take proactive measures to mitigate them.

✦ **Operational Efficiencies**
A frictionless onboarding process and streamlined workflows helps you deliver ROI quickly. Customized reporting and benchmarking provides valuable insights into your customers' security posture, facilitating transparent communication and informed decision-making.

✦ **Comprehensive APIs**
Integrate Censys data into existing security workflows and infrastructure like ITSM, SIEM/SOAR, CSPM, VM, etc.

✦ **Competitive Pricing**
Whether you're a managed service provider (MSP) with emerging security workflows, or a mature MSSP with an established way of working, you can expect competitive pricing on critical solution offerings.

censys

Censys' mission is to be the one place to understand everything on the internet. Frustrated by the lack of trustworthy Internet intelligence, we set out to create the industry's most comprehensive, accurate, and up-to-date map of the Internet. Today, Censys delivers real-time Internet intelligence and actionable threat insights to global governments, over 50% of the Fortune 500, and leading threat intelligence providers worldwide.
